

Why your AI pilot is stuck

Most enterprise AI initiatives fail before they scale. Here's what's blocking yours—and how to fix it.

Hatfield Lange Consulting LLC | hatfieldlange.com

The hidden reasons AI pilots stall

01

Missing business value

No clear ROI or strategic goal

02

Security gaps

Data leaks and compliance risks

03

User resistance

Employees won't adopt the tools

04

Poor execution

Lack of governance and oversight

Problem #1: No business value goal

AI without a clear business objective is just expensive experimentation. **What revenue, cost savings, or efficiency gain are you targeting?**

Without measurable outcomes, your pilot will drift—and executives will pull funding.

Problem #2: Leaky data + missing guardrails

Privacy and trust kill more pilots than tech ever does.

One compliance violation can shut down your entire AI program. Employees sharing sensitive data with chatbots? That's a lawsuit waiting to happen.

The security gaps that derail AI

Uncontrolled data access

Employees paste customer PII, financial data, or trade secrets into AI tools without privacy or security guardrails

No usage policies

Teams operate without guidelines on what data is safe to share or how to use AI responsibly

Missing audit trails

You can't prove compliance or track who did what when regulators or legal teams come asking

Problem #3: Employees don't trust it

If your team won't use your AI tools, they're worthless. **Low adoption kills pilots faster than bugs.**

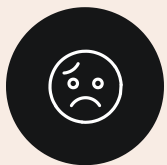

People resist what they don't understand and fear will replace them.

Why employees resist AI adoption

Lack of training

No clear guidance on how or when to use the tools effectively

Job security fears

Concerns about automation replacing their roles or devaluing their skills

Poor change management

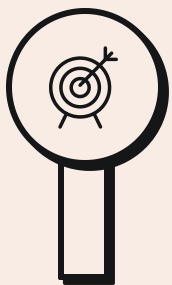

Tools rolled out without buy-in, feedback loops, or leadership support

How to unstick your AI pilot

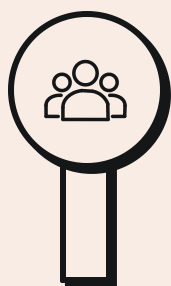

Define business value first

Set clear KPIs and ROI targets before writing code

Build security from day one

Implement data governance, privacy controls, and audit trails

Win user trust early

Train teams, address fears, and show quick wins that matter

Ready to fix your AI pilot?

Stop letting preventable mistakes stall your AI strategy. **Get expert guidance on turning pilots into production-ready solutions.**
